

PRV-1DA Pilot operated pressure relief valve 2 l/min

Product Description 1

The pressure-limiting valve PRV-1DA is a direct-controlled, robust valve for small volume flows and high pressures up to 420 bar. It is usually used in control blocks in the function of a pressure cut-off valve. This valve is available as a manually adjustable valve, as a hydraulically adjustable valve with a control pressure, and as an electrically proportional valve. The valve is also available in an electrically proportional version for the pilot pressure range of 0-50 bar.

Application 1.1

This type of valve is usually used for pressure cutting. In conjunction with a pressure compensator, a consumer pressure can also be limited at high volume flows. Likewise, a pump pressure limiter can be realized as a pressure cut-off. This valve may also be used as a piloting section of a piloted pressure relief valve.

1.2 Mounting location

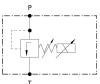

The PRV-1 DA is installed as a cartridge valve in control blocks or control valves. These can be positioned anywhere in a construction machine.

2 Function

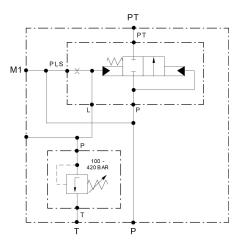

Application: In conjunction with a hydraulically actuated 2/2-way valve, a pressure limiting function with a flat characteristic can be established. P opens to PT as soon as the set pressure is exceeded. The return pressure has no influence on the pressure at P, thus it is also possible to establish follow-up or priority circuits.

2.1 Characteristics

- Cartridge screwed into stepped bore of different housings
- Directly actuated
- Hardened valve seats and cones •
- Reliable even with high pressure
- Available in various variants

PRV-1DA Pilot operated pressure relief valve 2 l/min

3 Technical Data

Criteria	Unit	Value
Installation position		Any
Weight	kg	MAN300: 0,2 - ELE120: 0,5 - ELE007: 0,5 - HYD100: 0,3
Maximum input pressure (P, A)	bar	MAN300: 420 - ELE120: 420 - ELE007: 50 - HYD100: 420
Adjustable pressure	bar	MAN300: 100-420 – ELE120: 120-420 – ELE007: 7-33 HYD100: VSt 6bar=100 VSt 26bar=420
Maximum return pressure (T)	bar	2 (recommended, added to the set)
Maximum volume flow (P)	l/min	MAN300: 2 - ELE120: 2 - ELE007: 5 - HYD100: 2
Hydraulic fluid		Mineral oil (HL, HLP) conforming with DIN 51524, other fluids upon request
Hydraulic fluid pressure range	°C	-20 to +80
Ambient temperature	°C	< +50
Viscosity range	mm²/s	2,8 - 500
Contamination grade		Filtering conforming with NAS 1638, class 9, with minimum retention rate $\beta 10 \ge 75$
Electrical-proportional Version:		
Supply voltage	VDC	12 or 24
Voltage tolerance	%	±10
Power consumption solenoid	W	33
Current consumption solenoid	А	2,9 at 12VDC, 1,4 at 24VDC
Duty solenoid	%	100
Protection according to DIN 40050		IP 65
Power supply plug		AMP Junior Timer Plug

Input flow rate 4.4

- 2 l/min
- 5 l/min at electrically adjustable 7 33bar. This variant has a larger seat diameter, therefore the pressure is reduced while increasing the maximum flow.

37,8mm

4.5 Maximum permissible pressure

- The maximum allowable pressure results from the spring.
 - 420bar (range of 100 420bar) .
 - 50bar (range of 7 33bar)

4.6 Activation

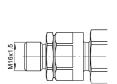

Pressure setting mechanical MAN300

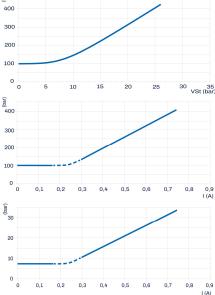

VORSICHT Einstellschraube nicht weiter als 43mm aus dem Gehäuse herausdrehen.

hydraulic HYD100 (100 - 420bar)

The hydraulic version of the valve has an M16x1.5 connection. If an external pilot pressure is applied to the valve, the setting value for the pressure cut-off valve increases according to the characteristic on the right

bar)

elektric ELE100 (100 - 420bar)

With the electrically proportional design ELE100 the basic setting of the valve can be changed by energizing the magnet. The characteristic corresponds to the graphic on the right. The magnet has a junior timer connector.

Lmin ≈ 40,6mm P ≈ 100 bar

elektric ELE007 (7 - 33bar)

In the case of the electrically proportional design ELE007, the basic setting of the valve can be changed by energizing the magnet. The characteristic corresponds to the graphic on the right. This design is used for influencing or adjusting piloting circuits.

The magnet has a junior timer connector.

PRV-1DA Pilot operated pressure relief valve 2 l/min

Cavity 051

The pilot-operated pressure relief valve is a cartridge device and is screwed into a stepped bore. WESSEL-HYDRAULIK Stufenbohrung 8.00152

5 Installation

5.1 General Information

- Observe all installation and safety information of the construction machine manufacturer.
- Only technically permitted changes are to be made on the construction machine.
- The user has to ensure that the device is suitable for the respective application.
- Application exclusively for the range of application specified by the manufacturer.
- Before installation or de-installation, the hydraulic system is to be depressurized.
- Settings are to be made by qualified personnel only.
- Opening is only to be performed with the approval of the manufacturer, otherwise the warranty is invalidated.

5.2 Connection suggestion

NOTE: Enclosed proposed resolution is not always guaranteed. The functionality and the technical details of the construction machine must be checked.

5.3 Installation - Space

The valve is screwed into a block with a torque of 50 Nm. A torque wrench AF 27 is required.

- Observe connection names.
- Do not damage seals and flange surface.
- Its hydraulic system must be vented
- Ensure a tension-free assembly
- Ensure sufficient free space for setting and installation work

6 Notes, Standards and Safety Requirements

6.1 General remarks

- The views in drawings are shown in accordance with the European normal projection variant
- A comma (,) is used as a decimal point in drawings
- All dimensions are given in mm

6.2 Normen

The following standards are to be observed because of the surface temperatures on the load control valve:

- EN 563, Temperatures on surfaces that can be touched.
- EN 982, Safety-technical requirements for fluid-technical systems and their components.
